

BLOCK.

Stackable plant pots for private or public areas.

The Block planters have the shape of two containers displaced side-ways. By stacking the pots - just like children's building blocks - a flexible structure is created suitable for various location and purposes such as a private balcony, terrace or garden, or as dividing units in public areas like outdoor diners or coffee shops.

JONASWAZELL, SE

Lightweight pots made for heavy duty environments.

The pots are produced of rotation or injection moulded polypropylene plastic, which make them light yet sturdy. The mean of manufacture is simple and cost-efficient, which enables large volume production and therefore should allow for an affordable retail price.

*Size according to
purpose and location.*

The planters can be developed in different sizes to meet different needs. A smaller size would be suitable for private use whilst a bigger pot would be applicable for public spaces such as food courts, café areas and more.
